CFlow™

CFlow™ – Manage Complex Workflows

Management of Change, Incident Tracking, Action Plan, Root Cause Analysis

CFlow allows for the configuration and management of complex workflows combining incident management, analytics, intelligence collection and collaboration tools. All of these capabilities in one cohesive tool allow for better protection of assets, mitigation of risks and identification of threats.

VALUE ADDS

Connects person-to-person e-communications with **business process automation.**

Provides a mechanism to ensure that **all parties** who should be "in the know" are **presented information in a timely fashion.**

Improves regulatory compliance by managing critical health, safety and environmental information.

Provides **collaboration** and shared knowledge. Facilitates quick **process improvements.**

Provides a centralized mechanism to **assign tasks** and confirm when they are completed by electronically requiring responses to the assignments.

Minimizes the flow of **paperwork** to complete a process and the possibility of lost paperwork causing the process to fail. Provides the capability to electronically note any questions regarding assignments.

Assign multiple **backups** for the workflows to ensure that an absence does not cause the workflow to halt.
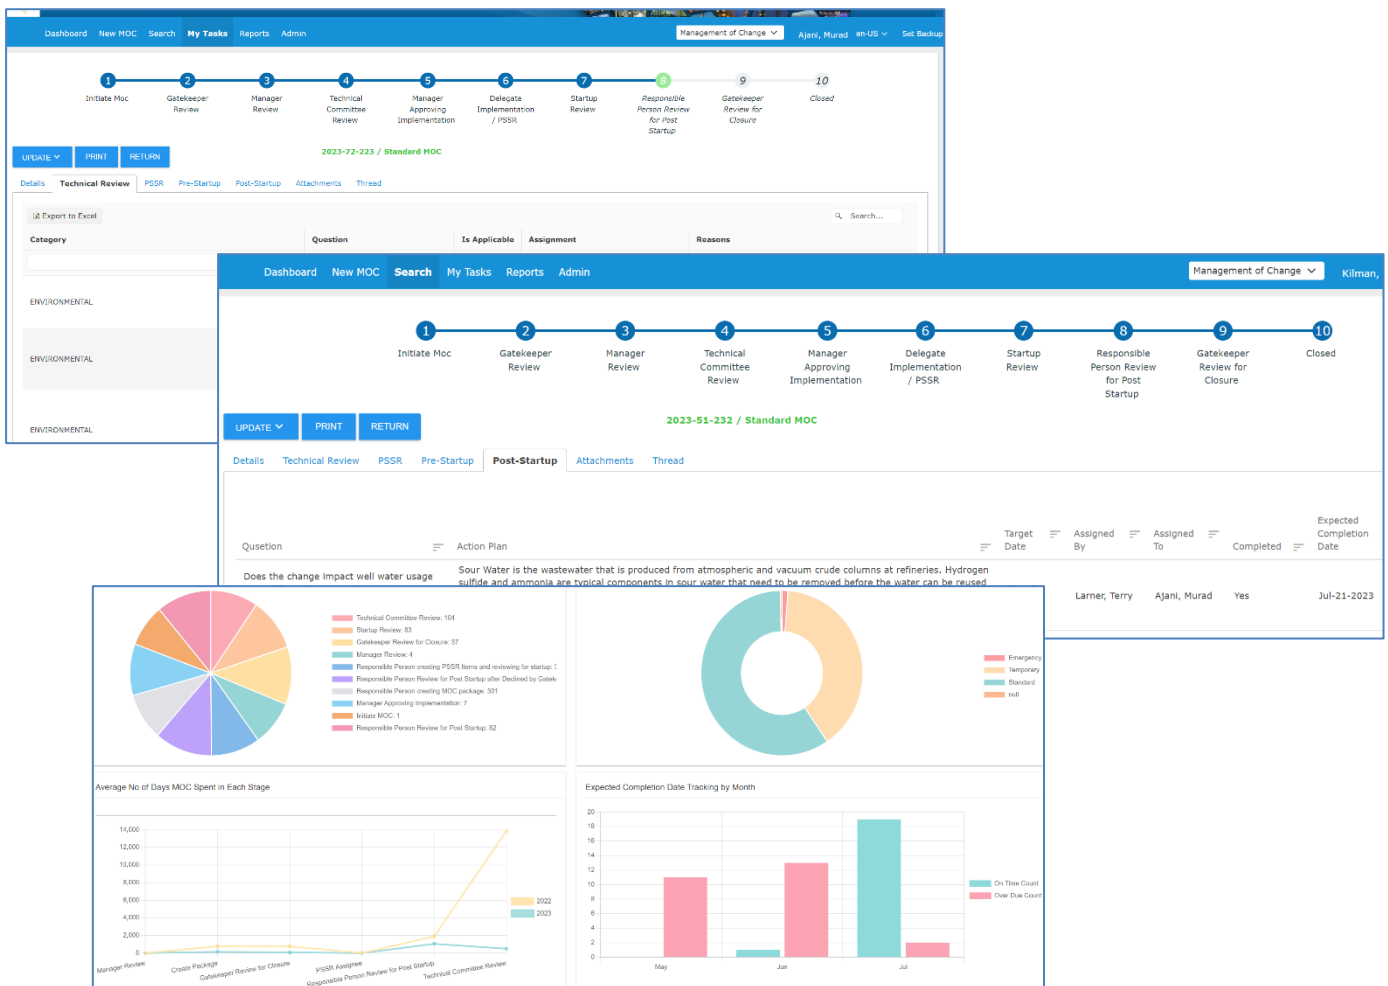

Automate graphs and reports to present information to stakeholders

Manage operations, easily document details as well as streamline processes using the flexible, configurable and powerful CFlow workflow management tool.

CFlow™

CFlow Key Features

- Configure MOC's technical review questions, PSSR checklist, pre and post startup tasks.

- Track changes and approvals from initiation to closure.

- Customizable workflow and process rules offer limitless possibilities for management configuration.

- Logs all discussions from involved and responsible parties.

- Notifications and mobile application allow for real-time collaboration, communication and reporting by all stakeholders.

- Manage different types of audits including incident investigation, MOC, PHA, RCFA and RCM.

- Ease administrative burden, increase visibility and monitor any new processes.

- Reduce paperwork and manage approvals and workflows end-to-end electronically.
